

119

Expansion joints are for compensating floor tensions in large areas, especially in public or commercial spaces and alferflex is a functional solution which prevents cracks in the flooring. In order to keep the continuous appearance of a surface with as little disturbance as possible, we have designed very slim expansion joint profiles.

Application expansion joint profile

alferflex – The expansion joint profiles were developed for thin-bed installation under particularly high mechanical loads and provide long-lasting protection against stress cracks.

The following applies to all **alferflex** thin-bed profiles made of aluminium and stainless steel: heights and lengths can be freely selected – also with a height offset. The colour and width of the silicone insert can be customised individually. For aluminium carrier profiles, an individual colour selection is also possible.

**FORMERLY
PROCONNEX**
CUSTOMISED
DESIGN WITH
OVER 40 COLOURS

alferflex

Our smart alferflex movement joint and screed profiles (formerly proconnex) offer attractive ways to design expansion joints not only functionally, but also as stylish design elements. At their core is a patented silicone insert made from a vegan polymer, which provides not only technical precision but also design freedom: it can be customised individually in over **40 attractive colours**. This allows joints to be used deliberately as a design feature for the first time – perfectly matched to tiles, natural stone or other floor coverings. The high-quality silicone insert also ensures long-lasting elasticity and durability, even under heavy use. alferflex: the intelligent solution for movement joints that convinces technically and also adds visual accents.

i

With stainless steel and aluminium, the carrier profile can be colour-matched.
